Nathaniel Point Farm
Boston Township
Summit County, Ohio

Description

The 3.1 acre Nathaniel Point Farmstead is located within the Cuyahoga Valley National Recreation Area in Boston Township. The Point House and Barn are bisected by Akron-Peninsula Road. The Point House is situated on the west side of Akron-Peninsula Road in a line of evergreens and Maple trees on a section of land that once was the ancient terrace of the Cuyahoga River. To the west of the house is a sloping, wooded area with scrub growth that extends to the eastern bank of the Cuyahoga River. On the east side of Akron-Peninsula Road is the barn, and south of it is a steep, wooded hillside (see photo 21). North of the barn is a field in cultivation.

There are ten resources within the Point Farm that are considered contributing: the house, the shed, the garage, the barn, the water pump, a well cap, two historic foundation sites, the flagstone walkway, and the field.

Built 1876, the house is a Tri-Gabled-Ell, two-story, wood balloon frame building that can be classified as a vernacular interpretation of the Queen Anne style. Along the west side (rear) of the core section of the house is a one-story, 10 x 18 foot addition with a shed roof. The addition, likely added in the early twentieth century, is the kitchen. On the west side of the house is a 6 x 4 foot, one-story, gable-roofed addition covering the basement bulkhead door that was added early in the twentieth century. Along the south and east sides of the house is an eight-foot wide wrap-around porch with a shed roof, which contains a gable-roofed portico. The porch’s perimeter is adorned with machine-turned spindle posts, rails, balusters, and
Nathaniel Point Farm
Boston Township
Summit County, Ohio

Description (continued)

curved corner brackets with finials. The door and window surrounds are plain faced. The steps to the porch are later additions but are similar to the flagstone walkway and the cut sandstone block foundation of the house. The flagstone walkway is considered a contributing structure because of its historic association to the farmhouse. Evident in a circa 1910 photograph, the walkway led to the main entranceway into the house (see photo 20).

All faces of the house are clad with asbestos shingles, and all of the roofs are covered with asphalt tab shingles. Full-sized windows are one-over-one with double hung sashes. Two slightly larger windows are situated in the first and second floors of the gable oriented section of the façade. The first floor window is a one-over-one, top light fixed transom window. An attic window is located in the gable oriented elevation of the house that contains colored panels surrounding a clear light. Both the attic window and the top light fixed transom window are characteristic of the Queen Anne architectural style (see photos 4-8).

A full basement with a poured concrete floor exists under the entire structure. The foundation is constructed of cut sandstone block (see photos 22-26). The addition on the west side (rear) of the building has a concrete block foundation. The interior of the house includes original wood trim with molded lintels, baseboards, and sills (see photos 27-34). The two exterior doors consist of four horizontal panels with a 2 x 2 foot glazed panel separating the first and second panels. The interior doors are two paneled.

North of the house is an 8 x 10 foot wooden shed with a gabled roof that may have been used as a granary. The structure is elevated on masonry piers. All sides of the shed are clad with horizontal tongue-and-groove siding, and all windows are six light fixed. The
Nathaniel Point Farm
Boston Township
Summit County, Ohio

Description (continued)

The roof is covered with standing seam metal roofing material added during a recent stabilization effort. In light of the design and building materials, the shed was likely constructed in the late nineteenth century. (see photos 11,12).

Along the west, south, and east elevations of the shed is a 20 x 45 foot cut sandstone foundation one foot above the grade. This contributing site may be the foundation of the milk house remembered by a former resident during her childhood, but further research is required to verify this hypothesis (see photos 13,14). The dimensions seem too large for the typical milk house and the size may indicate a barn or machine shed instead.

Roughly 15 yards southwest of the foundation is an additional 10 foot linear outcropping of cut sandstone. Further excavation is needed to conclude if the foundations were once connected. Both foundations are considered contributing sites for their potential to convey information regarding the orientation of outbuildings and arrangement of the Point Farmyard complex.

Approximately fifteen yards east of the shed is a 27 x 27 foot, wood frame, gabled roof garage. The foundation is concrete block. The floor of the building is compressed dirt. All sides of the garage are covered with horizontal novelty, or drop, siding, and all windows are six light fixed. Judging from the building materials (novelty siding and concrete block) the Point’s added the garage in the early twentieth century. The south gabled end contains two sliding-track doors. The roof is covered standing seam metal roofing material, which was added during a recent stabilization effort (see photos 15,16). Additional contributing resources include the well cap and the water pump.
Nathaniel Point Farm
Boston Township
Summit County, Ohio

Description (continued)

The Point Barn is situated on the east side of Akron-Peninsula Road. The raised bank barn is a 40 x 60 foot, two-story, four-bay, gable-roofed, post-and-beam building (see photos 1-3). According to the Summit County Tax Auditor's Duplicates, the Point's built the barn in 1877. The southern-most bay is probably a later addition. All sides of the barn have twelve-inch, flush, vertical, wood board siding, and the roof is covered with eighteen-inch standing seam metal roofing material. The west side of the barn contains a 6 foot high by 20 foot wide earthen ramp leading to the door of the threshing floor. A large sliding-track door to the basement is situated on east side of the barn. The foundation is cut sandstone block. All basement windows are three light fixed. The threshing floor gabled-ends contain two wood-louver vent openings with paired segmental arch heads. The floor joists are constructed of full-dimension, rough-sawn, 2 x 12 inch lumber, and the main floor is supported by hand-hewn posts (see photos 35-40). All posts above the main floor are machine cut, 10 x 10 inch timbers connected with 4 x 4 inch stringers (see photos 41-46).

The field north of the Point Barn is considered a contributing site in the nomination. Historically, the field has been in cultivation since the beginning of the farmstead.

The nominated area also contains an archeological site not included in the resource count. The archeological site needs to be studied further in the context of other near by sites, such as the Everett Knoll Complex (33 SU 14, National Register 1977), the Point Mound (33 SU 7), Whittlesey Earthwork #7 (33 SU 3), and other sites to determine its significance. Future research and analysis of this site are recommended, but are beyond the scope of this document.
Endnotes

1 Helyn Toth, interviewed by Jeffrey Winstel and Kristen Marolf, Everett, Ohio, 14 December 1993, Historical Resource File, Hawkins Library, Cuyahoga Valley National Recreation Area.

2 Summit County Tax Auditor’s Duplicates, 1876, 1877.

3 The southern most bay is evident in the earliest photograph of the barn (1910). Therefore, it is reasonable to conclude that the Point’s added the bay sometime between 1877 and 1910.

Statement of Significance

The Point Farm meets the registration requirements for farmsteads eligible under Criteria A and C as specified in the Agricultural Resources of the Cuyahoga Valley Multiple Property Documentation Form (Agricultural MPD). This property is being nominated under Criterion A for association with the agricultural practices of the Cuyahoga Valley. The Point Farm is a significant example of a farmstead that evolved in the Cuyahoga River Valley as a result of the development of advanced modes of transportation and improvements of farming technology. The "Railroads, Industrialization, and Scientific Farming: 1851-1913" section of the Agricultural MPD notes the increase in crop production and specialization as well as a focus on dairying on valley farms during this period. The Point Farm’s agricultural activity reflected these trends.

The farmstead is also significant under Criterion C for containing buildings that embody the distinctive characteristics of a type, period, or method of construction. The Point farmhouse is a Gabled Ell, a building type identified in the Agricultural MPD as significant. The Gabled-Ell is an example of the influence of pattern books and trade journals on the vernacular building types in the Cuyahoga Valley.

The Point barn, a Raised Bank Barn, is recognized in the Agricultural MPD as the dominate barn type in the Cuyahoga Valley. The Raised Bank Barn is indicative of the increasing importance of dairy farming as well as the specialization of grain production after the Civil War. Historical evidence of the Point Farmstead’s agricultural production reinforces its relationship to these broad trends of agricultural practices in the Cuyahoga Valley.
Nathaniel Point Farm  
Boston Township  
Summit County, Ohio

**Historical Background**

In 1794, the Treaty of Greenville ceded a majority of land north of the Ohio River to the United States and opened it to white settlement. The State of Connecticut retained ownership of the Western Reserve of the Ohio Territory, and on 3 August 1795, the state sold the entire tract to the Connecticut Land Company (CLC) for $1,200,000.

Like all land in the Cuyahoga Valley, speculators in the CLC originally owned the Point Farm, Boston Township Lot 29. In 1817, Ephram Root of Hartford, Connecticut invested $31,000 with the CLC for an undisclosed number of lots in Boston Township. Subsequently, Root granted power of attorney to the land company to sell lots to several non-resident individuals, which included Elephalet and Funice Averill. According to the 1839 Summit County *Tax Auditor’s Duplicates*, Averill secured clear title to Lot 29, and in 1847, the 111.82 acres were sold to David G. Meyers for $578. On 26 February 1857, Meyers sold Boston Township Lot 29 (111.82 acres) to Nathaniel Point for $1,900.

Point began his career in agriculture, and by 1860, increased the value of his farmstead to $3,000. In 1876, the Summit County *Tax Auditor’s Duplicates* note a house being built on the Point property (see photo 22). In the following year, Point constructed the existing barn. Tax records also list an additional barn, located to the northwest of the existing barn, being built in 1882 (see photo 23). Oral histories conducted with subsequent owners indicate the second barn was demolished in the 1940s.
Between 1867 and 1888, Point traded, purchased, and sold various land parcels along the eastern bank of the Cuyahoga River as well as "bottom land" between the river and the Ohio & Erie Canal. At the time of Point's death in 1902, his farm contained a total of 138 acres.

Nathaniel Point Jr. inherited the farmstead, and by 1904, he reduced the farm to its original 112 acres. Nathaniel Point Jr. farmed and raised a family on the land until his death in 1937. On 2 January 1939, Archie Point, son of Nathaniel Point Jr., sold the property to the Union Joint Stock Land Company of Detroit for $3,500. On 1 October 1940, the bank sold the farm to Dan and Alice Biro for $6,500. Prior to Dan Biro's death in 1956, the Biros divided the farm between their four children. Alice Biro retained a life estate interest in the house and 1.5 acres of the farm. Alice Biro died in 1973, and her heirs sold the house and 1.5 acres to Robert and Maree Peck. In 1980, the National Park Service (NPS) acquired the 1.5 acre land parcel and designated it HS 413 (CUVA Tract #114-62). The NPS purchased the barn (HS 414) in 1978 (CUVA Tract #114-21).

Since the acquisition of the Point House in 1980, the NPS has initiated rehabilitation efforts to convert the structure into an office. All actions were conducted in compliance with the Secretary of Interior's standards for historic rehabilitation.

Criterion A: Agriculture

The Nathaniel Point Farm is a significant example of a farmstead that developed in the Cuyahoga River Valley during the historic period of "Railroads, Industrialization, and Scientific Farming"
Criterion A: Agriculture (continued)

as defined in the Agriculture Resources of the Cuyahoga Valley Multiple Property Documentation Form.

Between 1850 and 1860, Ohio experienced a dramatic increase in the production of staple crops due to internal transportation improvements. Consequently, Cuyahoga Valley also enjoyed a growth in their agricultural economy. Driven by improved lines of transportation resulting from the Ohio & Erie Canal (O&EC) and later the Valley Railway, the Point Farm’s agricultural production characterized the shift from subsistence to market-driven farming in the Cuyahoga Valley, emphasizing wheat, corn, and oats. With Akron emerging as a major grain-milling center on the O&EC, farmers in the area responded by adapting their crops to meet market demands.9

The land on which the Point Farmstead is situated has been in agricultural production since the mid-nineteenth century. A review of available census statistics illustrates the increase in grain crops over time. The 1850 U.S. Census Productions of Agriculture Schedule for Boston Township Lot 29, then owned by David G. Meyers, lists crop production as the following: 45 bushels of wheat, 100 bushels of Indian corn, 45 bushels of oats, and 20 bushels of Irish potatoes.10

By the 1870 census, Point significantly increased all areas of production to the following levels: 130 bushels of wheat, 600 bushels of Indian corn, 200 bushels of oats, and 100 bushels of Irish potatoes. The amount of improved acreage also increased from 40 in 1850 to 75 in 1870.11 As a comparison, the 1870 averages for 75 acre farms in the valley were the following: 136 bushels of wheat, 302 bushels of Indian corn, 183 bushels of...
oats, and 87 bushels of Irish potatoes. The Point Farmstead crop production was above average in nearly category and it is reasonable to conclude that Point utilized his close proximity to the O&EC to sell “cash crops.”

Although competition from the emerging railroad industry after 1850 reduced the total amount of freight shipped on the entire O&EC system, the valley’s portion of the canal still remained a viable transportation route. With the opening of the Cleveland & Pittsburgh Railroad and the Cleveland, Akron & Zainesville Railroad in 1852, the O&EC developed a symbiotic relationship with the new railroads. The canal shipped the valley’s bulk staples, oats and grains, to distribution centers such as Cleveland and Akron where the goods were reloaded on freight cars and sent to eastern markets. The Point Farm’s 345 percent increase in oat production is especially indicative of the development of a market economy. Furthermore, local farmers utilized the O&EC as an option against the artificially inflated freight rates that characterized the early history of the railroad industry. Although a slower mode of transportation, the O&EC still serviced major centers of commerce, such as Akron.

During the mid- to late-nineteenth century, Akron’s Ferdinand Schumacher built his rolled oats cereal business into a nationwide commodity later known as Quaker Oats, a staple historically regarded as horse fodder. Dubbed the “Oatmeal King,” Schumacher expanded his company rapidly after supplying oatmeal cereal to Union troops during the Civil War. Schumacher paid high prices for oats, and it is clear that local farmers, like Point, adapted their crops to meet the demand. Situated
Nathaniel Point Farm
Boston Township
Summit County, Ohio

Criterion A: Agriculture (continued)

next to Schumacher’s Mill on North Street in Akron, the O&EC served as a direct line into the valley’s hinterlands. The influence Quaker Oats had on area farms was a localized occurrence and is historically significant.

The Point Farm’s rise in agricultural production echoed the prosperous agricultural community of Everett, Ohio (National Register of Historic Places, 1993). According to the Everett Historic District Cultural Landscape Report, agricultural market production increased from ten percent in 1850 to sixty-seven percent in 1870 on farms in the Everett community. The Point Farmstead, approximately one mile from Everett, utilized the “unincorporated hamlet’s” services, such as the school, post office, and later the train station. The Point Farmstead also experienced agricultural growth similar to the entire Everett community. Everett is a significant example of a community that underwent the transformation from yeoman farms to market-based farms as a result of internal improvements and industrialization in Northeast Ohio, and the Point Farm was part of the paradigm shift.

Criterion C: Architecture

The Point Farm’s buildings contain significantly distinct characteristics of construction practices associated with agricultural development in the Cuyahoga Valley as defined in the Agricultural Resources of the Cuyahoga Valley Multiple Property Documentation Form. Moreover, the spatial “flow” relationship between the buildings and the contributing field convey the sense of a functionally related unit and resembles a
 Criterion C: Architecture (continued)

regional pattern of farmstead development in the Great Lakes area.

The farmhouse evidences features associated with the vernacular interpretation of the Queen Anne building tradition, which is identified in the MPD as being representative of one of the architectural styles in the Cuyahoga Valley after the Civil War. The Point Farmhouse (c.1876) is a Tri-Gabled-Ell, a half I-house form attached to a perpendicular wing with gabled ends. The porch is one-story high and extends along the south and east sides of the I-house section. The porch contains turned spindled posts and brackets that are consistent with the Eastlake influence on the Queen Anne style.

The Point House is characteristic of the influence of improved transportation in the Cuyahoga Valley. With the national emergence of railroads, popular architectural styles were being widely distributed in plan and pattern books as well as trade journals. Farmhouses built adhering to modern styles indicated a certain level of success and prosperity. The 1870 U.S. Census Productions of Agriculture Schedule illustrates that Point’s Farm was a successful operation, and it is reasonable to conclude that his home represented a subtle reflection of his prosperity.

The Point Barn, situated on the east side of Akron Peninsula Road, is a Raised Bank Barn, a dominant style in the Cuyahoga Valley after the opening of the Ohio & Erie Canal, and one which continued to be built well into the late-nineteenth century. The barn is a rectangular, gable-roofed structure that has an
Nathaniel Point Farm  
Boston Township  
Summit County, Ohio

Criterion C: Architecture (continued)

earthen ramp built on one of the eave-oriented elevations (west side). The foundation of the barn is cut sandstone block, and a large sliding-track door to the barn’s basement is located on the east side. The second floor (threshing floor) held grain crops, and the basement housed equipment and livestock, especially “milch” cows (see photos 35-46).

Dairy production represented a significant aspect of the Point Farm, which is reflected in the barn’s architecture. Butter production increased 100 percent from 100 pounds in 1850 to 200 pounds in 1870, but the number of milch cows declined from five to three respectively. This rise in milk yield is clearly indicative of the influence of scientific farming in the valley. County fairs and agricultural associations educated area farmers to new and improved methods of farming. Area farmers chose improved breeds of cattle, fed them with specialized grains, and kept them inside barns during winter, which all increased milk yields per cow. The Point Barn’s design is representative of these agricultural improvements that attempted to make farming more efficient.

The Point Farm is also significant as a specific type of farmstead that developed in the Great Lakes region, a New York-Boston Fluid Milk Farm (NYBFM). Geographer Glenn T. Trewartha, in his article “Some Regional Characteristics of American Farmsteads,” identifies seven distinct farmstead types in the United States: Cotton, Wheat, Puget Sound-Willamette Valley, Range Livestock, Corn and Livestock, New York-Boston Fluid Milk, and Driftless Hill Land. Applying Trewartha’s criteria of style of home, building location, and field dimensions, the Point Farm clearly fits within the NYBFM farmstead model.
Nathaniel Point Farm
Boston Township
Summit County, Ohio

Criterion C: Architecture (continued)

One of the main regions in which the NYBFM farmstead developed was New York's Mohawk River Valley along the Erie Canal. Historian Nick Scrattish notes that a large portion of the Cuyahoga Valley's population migrated from New York after the opening of the Ohio & Erie Canal.\(^{21}\) Settlers from New York likely brought the model to the Cuyahoga Valley in the early nineteenth century. Crop production, livestock specialization, dairy production, and farmstead design is strikingly similar between the two regions.\(^{22}\)

The Point Farmstead contains all of the following defining characteristics of a NYBFM farmstead: eighty-eight percent of NYBFM farm houses are two-story structures with basements, and forty-one percent were built circa 1870; twenty-five percent of the house plans were Tri-Gabled-Ell; fifty-seven percent of the NYBFM farms had 100 to 260 acres of land and were rectangular in shape; and finally, fifty-three percent of the farmsteads fronted a public road of which thirty-three percent of the houses and barns were separated by a public road, more than any other region (See Figure 1).

Trewartha notes that this farmstead style characterized regions with advanced lines of transportation (roads, canals, rivers, and railroads) which experienced settlement early in the history of the United States. The Point Farm's architecture, spatial design, and production indicate the strong impact of cultural influences and scientific improvements on farmsteads in the Cuyahoga Valley.
Period of Significance Justification

The Point Farmstead’s historic era of significance could be placed within the period of “Railroads, Industrialization, and Scientific Farming: 1851-1913,” defined in the MPD, but it extends into the 1930s when the remaining Point family member sold the property. Therefore, the period of significance for the Point Farmstead is best defined as 1857 to 1939. During those eighty-two years, the property was farmed by the Points. There is no information that indicates that the Points engaged in leasing out land, truck farming, or sold mineral deposits, all which were characteristic of valley farms in the twentieth century.

All evidence suggests that the Point Farmstead remained a traditional late nineteenth century valley farm which did not experience the diversification some area farms did in the twentieth century. With the exception of the garage, all of the contributing resources convey the historical integrity of a functioning farmstead before the twentieth century. Built within the period of significance (1857-1939), the garage indicates the subtle intrusion of the automotive age on the Points and does not detract from the historical integrity of the farmstead.

Historical Integrity

The historical integrity of the Point Farmstead is well preserved. All of the nominated buildings have a high degree of design integrity. The house, although now clad with asbestos shingles, still retains its defining features. The house’s
Nathaniel Point Farm
Boston Township
Summit County, Ohio

**Historical Integrity** (continued)

spindle work porch elements, massing and fenestration, retain
significant integrity of materials and workmanship. The farm
buildings are in the same location they were during the
farmstead’s period of significance (1857-1939), experienced no
significant alterations, and are effective in communicating
their historical functions. The rural setting surrounding the
nominated property provides integrity of setting, feeling, and
association, which reflects the agricultural existence of the
Points.
