Grand Gold Medals

WITH HIGHEST HONORS WERE AWARDED TO

At hotly contested competitive Field Trials, conducted under the governmental auspices of Great Britain, France, Spain, Holland, Denmark, Sweden, Switzerland, Germany, Austria, Russia, Italy, Roumania, Algiers, Three of the Provinces of Australia, Chile and Mexico.

Buckeye

(Trade Mark)

Only six field trials of a national character, in which manufacturers participated, and at which gold prizes were offered, have been held in the United States, viz

1857, Syracuse, N. Y.  1870, Mansfield, O.
1866, Auburn, N. Y.  1874, Chadd's Ford, Pa.
1868, Xenia, O.  1876, Lafayette, Ind.

THE GRAND GOLD MEDAL, INDICATIVE OF THE HIGHEST HONORS, WAS AWARDED TO

AULTMAN, MILLER & CO.

IN ALL THE ABOVE TRIALS.
That Buckeye Knot.

An economic writer of celebrity has indulged in a surprising flight of romance, taking as his starting point "That Knot." And if the knot made by the Buckeye Binder be taken as representing the sum total of the labor-saving devices comprised in the machine, and if the social and commercial modifications in human affairs that are due to it be kept in view, it may easily be seen that the writer above referred to had ample material for the most interesting picture, without drawing in the slightest degree upon the imagination. Wire binding was the simplest and came in first. It was in vogue only two or three years, from 1878 to 1880. Twine binding was then adopted by the Buckeye. The low price and excellent quality of Buckeye Twine as a binding material leaves nothing better to be desired, and there is every probability that the twine binder has come to stay for an indefinite number of years. With the mention of "that knot" we are, however, incidentally tempted to suggest to the reader that he take a string and make the Buckeye Binder knot by hand, carefully watching the motions of his fingers as he does so. Thus seeing the considerable intelligent manipulation required in this one simple operation, and reflecting upon the added and no less ingenious devices for cutting, elevating, sheaf-making, separating, delivering and bunching, which, with their transmissions and adjustments, constitute the complete binder, he may form some slight idea of the mechanical difficulties that have been surmounted in bridging over the chasm between the back-breaking scythe and sickle and the modern Buckeye machine.
